Art Unit: 2833

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6 and 10-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Moriya (Figs. 1A-1D). This contactor arrangement comprises a blocking element 16 and contactors 21a, 21b including guides for contact 81a, 18b, 18c supports. The device operates as claimed; in particular, the contactor applies only compression force to the blocking element. In regard to claims 4, 13 and 14, the space in which the blocking element resides is seen to be a blocking holder. In regard to claim 10, the shape of the blocking element is seen to resemble a cardioid as well as that of the present invention; it is noted that neither are true cardioids.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mekelburg, et al. and Johnston, et al. both comprise blocking elements on which only compression forces occur.

Art Unit: 2833

6. Claims 7-9 and 16-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art fails to show or teach a blocking element, blocking element holder and contactors arranged as claimed.
